

The Metadata Intelligence Platform offers our clients **detection of complex scenarios** with the best accuracy while optimizing the overall cost to serve.

CLOUD SERVICE INTEGRATION

Best services available in the market from different cloud providers integrated into a plug&play mode. Flexibility for the best configuration to support complex scenarios according to client needs.

MACHINE LEARNING

Pre-defined ML models to perform specific tasks such as Computer Vision services, reliability, identification and deliver the most accurate results in the extraction.

ORCHESTRATION LAYER

Key layer to:

- Select best set of services to use according to use cases
- Correlate data from selected external service in a normalized structure
- Ask ML models to perform specific tasks with the purpose of extracting complex information leveraging the metadata collected

COMPLEX SCENARIO ENABLEMENT

Once we have completed the ML models and orchestration layer customization, clients are able to use our platform to acquire valuable information given complex scenarios
