

# LABORATORY LESSONS

## VIDEO TRANSCRIPT

**00:04** I've always loved technology even when I was a little child.

**00:11** I love solving problems

**00:13** and sort of tackling engineering challenges

**00:18** and that has followed me through my whole career.

**00:38** My degree actually wasn't in technology as I work in it today,

**00:44** I was in material science.

**00:46** But it was still about engineering and problem solving.

**00:49** And so I transferred that thinking

**00:51** into the work I do here at Accenture Labs.

**00:55** So the advice I would give to a young inventor is, one:

**00:59** to be persistent.

**01:01** Two: to stretch or challenge your boundaries

**01:05** and being okay with failing.

**01:07** I think that's part of what really drives through invention.

**01:11** But the real breakthroughs come from

**01:14** really stretching and growing and sometimes failing.
