ACCENTURE INTELLIGENT DATA PLATFORM

VIDEO TRANSCRIPT

Imagine turning up at your new house only to find your belongings aren't where they're supposed to be or haven't made it at all. Moving your company data to S four Hana might give you the same sinking feeling. That's why we created the intelligent data platform. It's a single integrated platform that handles all your data quality and migration needs from profiling to cleansing, construction, to readiness validation to load. We're redefining SAP data migration with innovations like the rapid data loader. It uses leading edge technology, shortening migration load cycles by over 90% minimizing errors. The result is a safe, speedy process that takes not weeks, not days, but hours. Ai and ML enabled tools quickly assess data from any SAP or non SAP source system. A simple, intuitive UI makes it easy for business users to validate, create, and correct data in a controlled manner. Clean and accurate data ensures smooth operations and robust analytics from the outset. And sophisticated automation frees up resource and reduces human error. By introducing generative AI, complex tasks such as harmonization and cleansing become much easier. Unlike other alternatives, we don't stop at migration. You can continue to use the platform to assess and monitor data quality for more efficient processes and accurate insights. It's no wonder we're number one for data and analytic services. Moving house will always be stressful. Migrating your company data to S four, Hana needn't be with Accenture.
